

24/7 Maxibar concept

Premium automated service for hotels & resorts

Customer care around the clock – 24/7

Investment that pays off – automatically

Taking care of a guest around the clock is a challenge that even Luxury hotels struggle to achieve. With vending machines from Sielaff, without increasing staffing levels, you can offer your guests a large selection of products and the same time maintain accurate stock control. The investment costs for strategically distributed machines within your location are lower than those for one minibar in each room. The Maxibars offer refreshments around the clock, in standard sizes and extensive range!

Whether traditional snacks, sandwiches, accessories or hygiene products – enhance your customer service without having to check every minibar upon every check-out. The possibilities are virtually endless – from slippers and sun screen in a beach hotel to special seasonal promotions such as local wines, sparkling wine, chocolates and other delicacies – surprise your guest with individual offers.

The overall package is perfect

Whether in the foyer, on each guest room floor or in a leisure area, a SiLine® machine always displays its products best in situ. Practical and fast and always close to the guest. Whether drinks, snacks or non-food – behind the large glass front with its LED illuminated interior your guests will find an extensive variety of products on up to six shelves, including fresh food (as an option). The Sielaff lift system ensures the gentle dispensing of glass bottles, fizzy drinks and sensitive products.

A communication platform for your guests

On the touchscreen, each consumer can select the language of their choice and choose the products using an alpha-numerical keyboard or by image, depending on your operational settings. The shopping cart function enables up to 5 products to be purchased in a single transaction. Between sales, to inspire your customers, broadcast video clips and local information that can be easily updated.

Silent and environmentally friendly

The innovative SiLine® vending machines dispense products quietly. This makes them best suited for being placed on guest room floors or near the spa area. The SiLine® Vending machine line also scores in terms of saving resources: the lighting concept with LEDs, thick insulation, energy-saving fans and individually adaptable temperature control settings – all energy savers.

Variable design – perfect integration into every décor.

Sielaff's SiLine® vending machines are known for their modern and appealing design which will always catch the attention of potential consumers. Available in several variants and with numerous options, the machines will harmoniously blend into all decors and meet the aesthetic requirements of each site. The LED stripes are a real eye catcher everywhere too.

SiLine®: vending machines which do not hide. Discreet but not to be overlooked.

Technology

- Sale of sweets, snacks, fresh food products, drinks and non-food articles using spirals and pushers
- Refrigeration configurations suitable for the storage of fresh food products in the machine are available as an option (LM and 2T-LM versions)
- Payment is made at the machine – whether cash or cashless – the turnover can be read out via telemetry or USB stick, as a total figure or individually by selection
- As standard HC refrigerant R-290 with a GWP of 3
- Energy saving LED-lighting
- Individual temperature control settings adapted to the location and product requirements
- Modular construction, which makes the machine service and recycling friendly
- Touch screen and payment systems at ergonomic height
- 7"-Touch display with stunningly brilliant, wide angle picture quality and 800 x 480 pixel LED-backlighting
- Product pictures and information display
- Storage space for pictures, video clips etc. The storage capacity can be increased even further by using an USB-stick
