

The Reverse Vending Expert

SiLine® SiOne

Benefit from our strengths

Sustainability starts with reverse vending

Sielaff is not only the leading German vending brand, but also the pioneer in the field of reverse vending systems. The SiLine® SiOne is easy to use, has a high processing speed on site for staff, as well as providing cleanliness and hygiene for its customers. Contact with empty packaging is a thing of the past, now replaced by smooth and trouble-free daily operation.

Wide range of acceptance

The SiLine® SiOne is the cost-effective solution for returning reusable and non-reusable drinks packaging – such as PET-bottles, cans and cups. The further development of updates and classification with up to five different items the SiLine® SiOne offers improved packaging recognition and thereby greater protection against fraud. Invalid or manipulated labels and packages are rejected. Straight-forward, menu-guided programming means that new products can quickly be incorporated into the system.

Well-thought-out technology

Separation into two sections – PET-bottles/cans or non-reusable/reusable packaging- provides useful pre-sorting of packaging. It's all in the detail which is typical of Sielaff, a fold-out holder for collection bags is included, and fast, simple swap-over of roller containers. A handle is even provided to facilitate emptying.

Future-proof

Can be telemetry enabled so that data can be downloaded from the machine or directly into the machine using a USB-stick. The software can monitor the number of containers and amount of deposits refunded. Operation is simple and effortless.

Modern design – perfect in a vending line

This machine can be perfectly integrated into a SiLine®-Series vending bank. There are two designs to choose from the SiLine® SiOne VA or RA.

The SiLine® SiOne Standard VA is made from hard-wearing painted steel and boasts a distinctive stainless steel lower decorative panel on the door. The RA-design specification is fully matt painted steel. The LED-decorative strips in design package A are a real eye-catcher. Design VA with design package B demonstrates a superior look combining polished stainless steel panels with matt black. Whatever the location the uniform line design of the SiLine® range guarantees a positive perception and fits perfectly into any surroundings. Even as a single unit, the SiLine® SiOne-range of machines creates a great impression from day one.

Simple as a Smartphone

Communication is easy and effective using the 7"-Touch-Display which shows the customer straightaway the acceptance status and the amount of deposit refund. Operation is intuitive and easy. High storage capacity enables video clip playback and commercials.

General facts

- Returning PET-non-reusable and recyclable containers cans and cups with an EAN-code
- Barcode recognition (up to 20,000 codes)
- Acceptance speed: Up to 30 containers per minute
- Capacity: Up to approx. 400 bottles (0.5 l PET) or up to approx. 560 cans
- Perfect for a vending line with other SiLine and vending machines
- Modular design: service-friendly and easy to recycle

Features

- Rotating drum
- Coin hopper holds up to 2,000 coins
