New spiral adjustment for SiLine Snack / SN 48

As we continually endeavour to improve our products and quality we have re-designed how spiral adjustments are made in the SiLine Snack and SN 48 vendors.

The way the new solution works is extremely user-friendly. The SiClip'n-Turn System is an ingenious way of simplifying spiral adjustments.

To remove a spiral, press the mounting clips at the back together.

The loose spiral can now be moved to a different position.

To refit the spiral in its new position, simply push it backwards into the mounting clip, so that it locks into place.

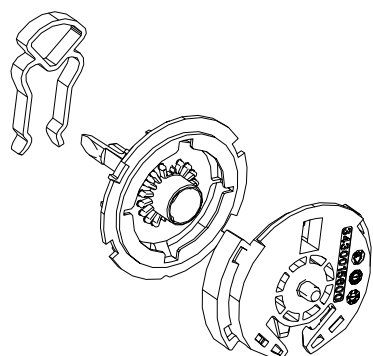

The new spiral adjustment has been available as standard since 1.1.2021 in the following machine types:

- SiLine Snack
- SN 48 RB/EB 01

TECHNICAL INFORMATION

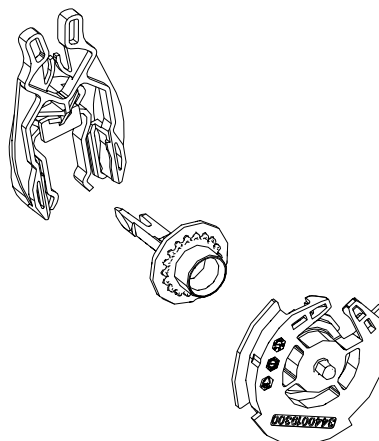

SiClip`n-Turn can be retrofitted. Only three plastic parts must be changed per spiral.

Previous:

343 00 156 00	Plastic wheel at back of spiral
343 00 157 00	Motor coupling
343 00 158 00	Motor fixing

New:

344 00 193 00	Plastic wheel at back of spiral
344 00 192 00	Motor coupling
344 00 194 00	Motor fixing

The following kit contains all the parts required to convert one selection.

344 50 192 00	SiClip`n-Turn spiral adjustment kit
