Machine type/s: HG/HO

Vane pump for HG and HO machines

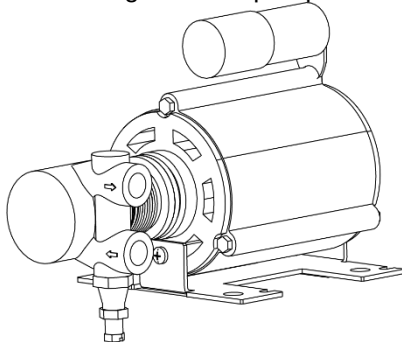

Due to supply issues experienced worldwide there has been a shortage of a key component. To maintain the supply chain, as a temporary measure we will be fitting an alternative vane pump.

The alternative vane pump with a stainless steel head is also from Fluid-o-Tech and has been tested extensively in the laboratory. Performance data with regard to pressure gradient and volume conveyed by the pump is identical to the original. Furthermore it works extremely well in our equipment.

From **production week14** and **serial number 90532378** the alternative pump will be fitted in the following machine type:

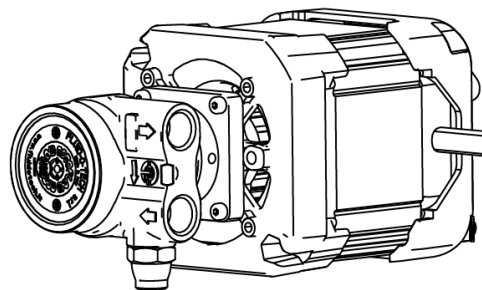

- Siamonie Series ES/IN
- SiVend HG15 TT ES/ IN
- HG floor-standing machines - Series ES/IN
- SiVend HG20 Trend ES/ IN

Original vane pump

Part number: 985.27.912.00

Alternative vane pump

Part number: 985.27.937.00

If the part needs replacing both pumps are compatible so the original pump can be retro-fitted without any problem. The alternative pump is not being supplied as a spare part.
