Machine type/s:

HO Siamonie Smart

Preparation for Siamonie Smart fresh milk module

Cappuccino with fresh milk? Our Siamonie Smart can do that now too. We have developed an optional fresh milk module for this purpose. So that the external module can be retrofitted to every Siamonie Smart in the future, the Siamonie Smart will be fitted with the preparation in the factory.

The external fresh milk module can be attached to a prepared Siamonie Smart very quickly. Coated perforations are integrated into the left side wall and into the rear wall of the Siamonie Smart for this purpose. These perforations are barely visible and can be broken out, if needed. The cable tree has also been upgraded with the necessary wires.

The preparation will be included as standard from serial number 90523292 and production date CW13/2021. Appliances prior to the production date of CW13/2021 cannot be overhauled or retrofitted.
