Machine type/s: HO Siamonie Smart

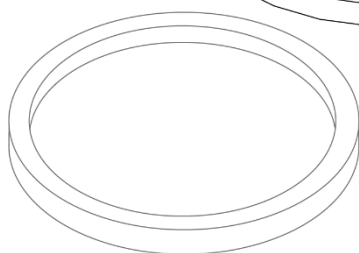

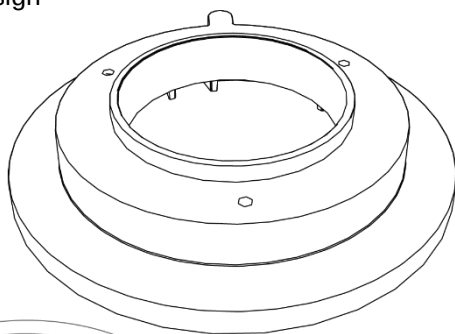

New grind adjusting ring

As we continually endeavour to improve our product quality we have updated the grind adjustment on our Siamonie Smart.

Thanks to this improvement the gap between grinder and bean container has been reduced even further. This is due to the flange being higher resulting in a material overlap which produces a seal. The O ring is therefore no longer required.

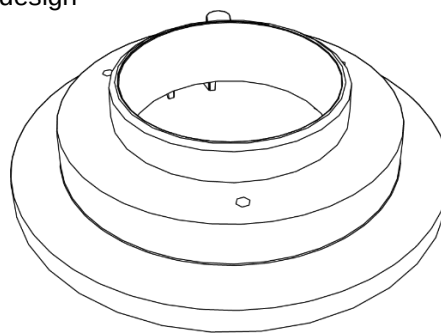

The new ring for adjusting the grind will be fitted from **production week 20 2022** from **serial number 90532980** as standard.

Previous design

Grind adjusting ring
(O-ring required)

New design

Grind adjusting ring
(no O-ring required)

The grind adjusting ring can still be ordered as a spare part using part number 417.00.324.00 and if necessary exchanged and upgraded.
