Machine type(s): HG SiVend 15 TT

HG SiVend 15 TT Software M15Ns811

The latest HG SiVend 15 TT Software M15Ns811 comes with new functions and optimises previous features. Please take note of a few highlights.

Locking times

Locking times are set individually for each selection. This prevents multiple locks on a single selection or selection level.

The Locking Times menu shows all selections that are programmed for a product.

Pot

The sale of pot size hot beverages does not begin until sufficient credit has been added.

When buying a pot, the change is not returned until the last cup has been dispensed.

Payment

The Israeli shekel was added as a new currency.

The special code E01 'Do not allow mixed payment cash + card' was moved to the EVAOptions.

Pricing for two cashless systems was optimised.

Grounds container

The grounds container is switched off when the value is at '0'. The number of coffees dispensed is not counted.

Coffee dosing

The brewing unit controls were improved.

Logging of inadequate/excess doses of coffee powder was improved.

Display of inadequate/excess dosing of coffee (compare TI0123) can be controlled using the special setting C04. The C04 function is disabled by default so that error message is not shown until the door is open. If the C04 function is enabled, the error message will also be shown on the vending machine when the door is closed.

Download

The latest software can be found on our homepage in the [Download Centre](#).
