HG Software 809 / 602

Under continuous product improvement, the series software of the CIS 500, CVS 500, SiVend HG 20 Trend Instant, SiVend HG 20 Trend Espresso and SiVend 15 TT hot beverage machines has been updated. The aim is to rectify errors and reduce the risk of malfunctions.

HG floor standing units

As a result of the change, the CIS 500, CVS 500, SiVend HG 20 Trend Instant and SiVend HG 20 Trend Espresso machines can now process more price lines at once. The price calculation and payment process has been extended by MDB4.3. The credit display has also been extended to three digits. The special D 64 setting can be used to manually set no change to be dispensed if a cup is missing in the cup arm in order to counteract cup theft. The happy run (the check to determine if a cup has reached the cup arm), is also no longer carried out automatically.

Tabletop

On the SiVend HG 15 TT, the price calculation and the display after door opening have been optimised. Here too, more price lines can now be processed at once. The billing process has been improved to allow for mixed payments. The credit display has also been extended to three digits. The light barrier can be deactivated manually. The display has been corrected.

The following software components have been updated:

Machine	Previous software	Current software	Ex works for serial number
CIS 500	MTIMv503.pat	MTIMv809.pat	90537447
CVS 500	MTEMv503.pat	MTEMv809.pat	90537330
SiVend HG 20 Trend IN	MSNMv503.pat	MSNMv809.pat	90537178
SiVend HG 20 Trend ES	MSEMs503.pat	MSEMs809.pat	90537160
SiVend HG 15 TT	M15Ms503.pat	M15Ms602.pat	90534249

The software components were introduced on 12/08/2022 and the latest software can be found on our homepage in the [download centre](#).
