SiVend GF 75 / SiVend GF 99

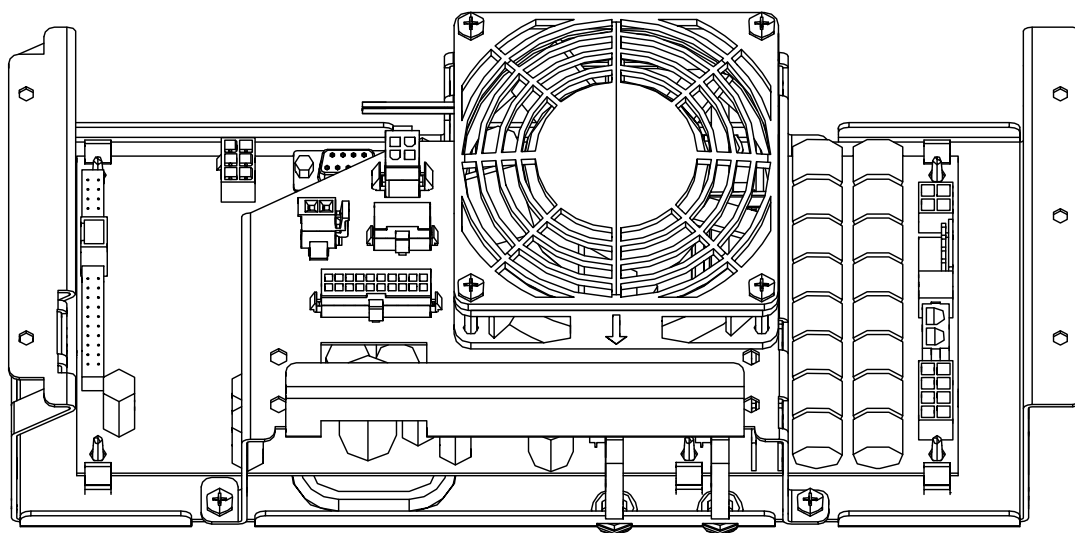

The IMAX 2 “quiet control board” is discontinued

For a year now a microstep driver used for the “quiet control board” option in the SiVend GF99 / SiVend GF75

has been discontinued by our supplier. When this component was discontinued we removed the option from our price list.

Now that that we have exhausted our remaining stock we must remove this option from our spare parts portfolio.

It is only possible to repair the control board if a standard IMAX 2-board component is faulty. If the microstep driver is damaged, we are no longer able to repair the control board.
