Vending machine type(s):	SiVend Robimat

Drawer improvement

The inner part of the drawer of the SiVend Robimat X series is currently painted black. However, this feature has proven to be less than ideal due to lighting conditions at the installation sites.

Over the years, we have received positive feedback that not painting the drawer – for instance, in the SiLine GF – makes the components more visible. The greater contrast improves the efficiency of maintenance work conducted on the control system or coin mechanism.

We therefore intend to adapt SiVend Robimat X series components to be the same as those of the SiLine.

This improvement means that the inside of the drawer will no longer be painted. This is not visible to your customers.

Introduction

We plan to introduce this change on 2 January 2025.
