SiLine Software 0.24.1

The new SiLine Software 0.24.1 offers additional functions and optimises existing features. We would like to draw your attention to a few highlights.

SiLine SÜ

The handling of irregularities during initialisation has been improved. In addition, the vending machine's internal processes have been optimised to ensure more efficient execution of processes. The control sequences for the change motor have been adjusted. Translations for English, French, Dutch, Polish, Romanian, Italian, Norwegian, Serbian and Swedish have been updated.

SiLine GF

The handling of irregularities during initialisation has been improved. Furthermore, the vending machine's internal processes have been optimised. The [Lift Calibration] menu has been adjusted. The control sequences for the cash return motor have been adjusted. Translations for English, French, Dutch, Polish, Romanian, Italian, Norwegian, Serbian and Swedish have been updated.

SiLine HG

The internal processes of the vending machine have been further optimised. The handling of irregularities during initialisation has also been improved. The control processes for the cash return motor have been adjusted. Translations for English, French, Dutch, Polish, Romanian, Italian, Norwegian, Serbian and Swedish have been updated.

To use new functionalities correctly, existing and newly created data records must be edited and created using the current SiLine Configurator version, 1.6.0.10.

SiLine RN

The handling of irregularities during initialisation has been improved. The vending machine's internal processes have been further optimised. The control sequences for the cash return motor have been adjusted. Translations for English, French, Dutch, Polish, Romanian, Italian, Norwegian, Serbian and Swedish have been updated.
