

TECHNICAL INFORMATION

31. August 2020

TI1420

Machine type/s:

SiLine GF / SiLine SÜ

New SiLine Software

The new SiLine Software offers new functions and improves existing features. As well as general improvements we would like to make you aware of several special features.

The following functions relate to all SiLine-machines:

Payment systems

A new menu item in the service menu enables the selection of (DEX-UCS,DDCMP, Online) communication protocol.

For cashless payment systems SELx-protocol has been introduced. This means that now only cashless systems can perform a sales enquiry on the machine.

Notifications from the cashless system can now be displayed on the machine's touchscreen.

Localisation

Norwegian text has been improved.

Media

Organising pictures has been simplified. Pictures larger than (480x480px) are no longer accepted. Assigning a picture activates the assignment of all pictures.

Operator interface

Hotel mode has been implemented. With this function a four-digit code must be entered before a vend can be made.

The operating concept of direct selection is now available. Instead of alpha-numerical codes product selection can be made via a picture on the touchscreen.

Insufficient change notification on the display has been improved.

TECHNICAL INFORMATION

Special Functions SiLine SÜ (Spiral vending machine)

Blocked product delivery drum

How the machine behaves when the product delivery drum is blocked has been optimised.

LM-Function

The "food safety"function has been improved.

Shopping cart function

The shopping cart function is now only available for several selections.

Update

The new software has already been installed on the following machines before leaving the factory.

Machine	Software	From serial number
SiLine GF	0.13.0	90510006
SiLine SÜ	0.13.0	90510005

The latest corresponding software can be found on our Homepage in the Download-Center (<http://www.sielaff.de/download-center/>).
