

TECHNICAL INFORMATION

Date: 27.06.2024
TI: 1724
Machine type(s): SiLine SÜ

New SiLine kickplates

We are currently standardising the design of our SiLine line of machines. We have decided to replace the presently used perforated kickplates of the SiLine SÜ with unperforated kickplates. All other appliances in the SiLine family already have unperforated kickplates of this kind.

Our extensive tests have shown that this change has no measurable impact on the functions or performance of the machines.

We constantly endeavour to improve the quality of our products. This change makes the machine's design even more elegant without compromising its performance.
The new trims will be introduced starting in calendar week 31/2024.
