

TECHNICAL INFORMATION

Date: 24.06.2024
TI: 1824
Machine type(s): SÜ SiLine

SiLine Lift

We would like to inform you about a firmware update being provided as part of the continuous improvement of our products. The latest series software version from 0.20.0 onwards significantly enhances the lift system.

Its braking behaviour in particular has been improved to decelerate and soften braking processes. This modification helps to significantly extend the drive belt's service life.

To get the best performance and durability from your devices, we recommend installing this update in all units with toothed belt drives that were produced before the end of November 2023 (serial numbers up to 90548385) and currently have a software version older than 0.19.1.

Please do not hesitate to contact us for further information and assistance with the update process.

Download

The latest software version is available from the [Download Centre](#) on our homepage.

Vending machine	Current software version	Installed at the factory for serial number
SÜ SiLine	0.20.0	90552926
