

TECHNICAL INFORMATION

Date: 04.08.2022
TI: 0722
Machine type/s: SIELECTOR

SIELECTOR 3.03

The new SIELECTOR 3.03 offers new functions and enhancements. We would like to take this opportunity to advise you of some of the main features.

Payment systems

Cashless

The time frame from when a product is selected and a cashless card is presented for payment has been increased to 99s.

Tokens

E-60 option "Once Value Token" only one Value Token can be accepted per sale. Contrary to a "Vend Token", which triggers a one-off free vend, the "Value Token" reduces the selling price by a defined amount.

As standard the E60 option is switched off, so that several "Value Tokens" during a vend process can be accepted.

The "Once Value Token" function is also supported via MDB.

Data transfer

Data export has been improved.

The journal has been optimised.

Compilation of machine data via IRDA has been enhanced.

Hot drinks.

Especially for our hot drinks machines the following adjustments have been made:

The "Pre-infusion" function takes into account the total water quantity of the individual drinks.

Add-on buttons such as sugar and topping can also be evaluated.

Existing data is recognised on new machines (Siamonie, Siamonie Smart, HG15TT).

SiDesigners2 connection has been improved.

The SiVend HG 15 TT variant has been increased to 75 recipes (see product recognition).

Cup prices can be programmed on HG machines.

The light barrier option on the HG 15TT can be activated and deactivated.

Siamonie and Siamonie Smart

The layout of the Siamonie variant 1102 has been enhanced.

Improvements have been made to the Prices/Assignment layout in the display.

Special settings "I" are supported.

Cold drinks

The chiller unit status (on/off) can be configured.
Error communication has been improved.

Serwin

Serwin has been improved. Further details can be found in TI (T0822).

Download
