Konfigurator

SiLine Konfigurator 1.4.0.0

The new SiLine Konfigurator 1.4.0.0 comes with new functions and optimised features. Here are just a few of the latest highlights.

Localisation

We have improved the English translations.

Recipes

We have improved how partial recipes are deleted. Older data sets containing relevant fragments are automatically purged when the data sets are reloaded.

Configuration

We have improved how configurations are saved.

Error handling

Email notifications can be deactivated.

Error files and log files can be selected using a button.

Download

The latest software version is available from the [Download centre](#) of our homepage.
