HG

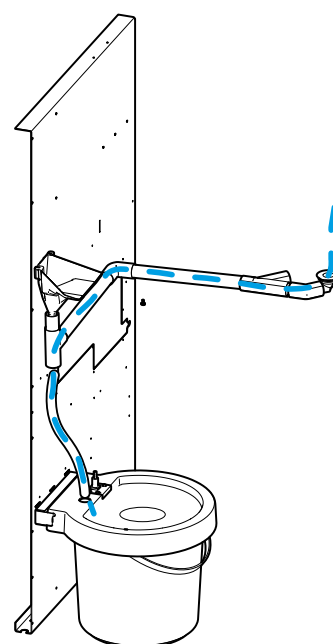

Residual water in the waste water bucket

We have produced a conversion kit for our floor standing HG machines fitted with an espresso brewer, so that following the brewing cycle the residual water is not directed to the grounds container but to the waste water bucket. If you prefer this variant, you can order the conversion kit using part number 404.50.802.00 waste water pipe. Detailed fitting instructions with illustrations are enclosed with the kit to assist with the conversion.

Before the conversion

After the conversion

Please bear in mind that with this version the bucket fills up relatively quickly and the cleaning cycle may need adapting.
