Machine type/s: _____

SiLine SÜ (Lift)

New product collection tray

In TI0918 we introduced the function "Delivery without lift". This function reduces the dispense time, whereby non-fragile products are delivered without using the lift. By introducing this software function the light barrier in the product collection tray has been optimised.

From serial number 90480973 the new product collection tray is fitted as standard.

Before activating this function please check whether the products can be recognised by the light barrier and are suitable for the respective drop height.

Ensure that the function "Delivery without lift" is disabled for products requiring lift delivery.
